

# ANTISCALE G

tile cleaner, surface limescale remover gel

## APPLICATION:

The product is a gel-like liquid used to remove scale and metallic precipitates from acrylic hot tubs, film-, tile- or mosaic covered surfaces.

## USE:

Apply the product onto the surface to be treated with the help of a sponge.

Generally, if applied as a thin layer, 1 kg of DE-VÍZKŐ G is enough for treating approx. 10-15 m<sup>2</sup> scaled surface. Depending on the thickness of limescale, repeat the process.

The product has limited impact on iron or manganese precipitates as well.

Wait 5 to 20 minutes after wetting the surface, then rinse it with clean water.

Before treating the surfaces, do a trial cleaning at a surface out of sight. To avoid skin irritation, wearing safety gloves and goggles is compulsory.

## AVAILABLE SIZES:

1 kg plastic bottle, 5 kg non-returnable drum, 10 and 20 kg returnable container.
