

# DINADOX A+B

Application for ALGAE REMOVAL

**DINADOX A+B** chlorine-dioxide disinfectant is extremely **good at algae removal** according to the following:

## Uninterrupted dosage for prevention:

Added by dosing pump during the day:

- 2 kg /100 m<sup>3</sup> /day

- 7 kg /1000 m<sup>3</sup> /day

The daily quantity should be dosed continuously and balancedly by Stenner dosing.

## Shock treatment:

The person dedicated to execute the process participates in a training organized by our experts because of labour safety considerations.

Dosing quantity:

- 3-5 kg / 100 m<sup>3</sup>

Introduction into water: in one dose, pour it into the water. When added to the water overnight, it almost totally decomposes during 12 hours.

The presence of chlorine is needed in both cases, the ideal concentration is between 0.5-1 mg/l.
