

SURFACE DESCALING AND CLEANING

DE-VÍZKŐ G

Tile cleaner, limescale remover liquid

**APPLICATION:**

For residential and professional use.

PACKAGE:

- 1 kg
- 5 kg
- 10 kg
- 20 kg

STORAGE:

Store in a cool, dry, frost-free place away from direct sunlight.

FIELD OF APPLICATION:

A gelled liquid suitable for descaling and removing metallic deposits from acrylic bathtubs and foil-, tiled- or mosaic-covered surfaces.

APPLICATION:

Apply the limescale remover to the surface using a sponge.

Under normal conditions of use, when applied as a thin layer, 1 kg of DE-VÍZKŐ G is sufficient for approximately 10–15 m² of surface area.

Depending on the thickness of the limescale deposit, repeat the application several times.

It can also be used to a limited extent for removing iron and manganese deposits. After wetting the surface, leave the product to act for 5–20 minutes, then rinse the surface thoroughly with clean water.

Carry out a cleaning test before treating the surfaces. To avoid skin irritation, the use of rubber gloves and protective goggles is mandatory.
