

JACUZZI TREATMENT

# DEWAN<sup>®</sup>-20 WP

Chlorine-free bath water treatment  
tablet

## APPLICATION:

For residential and professional use.

## PACKAGING:

- 1 kg box
- 5 kg bucket

## MEASUREMENT:

- Dewan-20 tester
- Dewan-20 measuring strip

## QUALITY RETENTION:

for 2 years from date of manufacture

## STORAGE:

in a dry, cool place protected from light

20 g tablet containing active oxygen for treating water in pools and hot tubs smaller than 3 m<sup>3</sup>. Can be used as a substitute for liquid, chlorine-free DEWAN<sup>®</sup> disinfectants, either on its own or to supplement their effect.

## DOSAGE:

### Pre-dosage steps:

**Before using DEWAN<sup>®</sup>-20, be sure to disinfect the entire water cycle of the pool! (shock treatment with ALGA SOKK P)**

Mix 50 g/m<sup>3</sup> (approx. 3 tablespoons) of ALGA-SOKK P granules into the water, which has been previously dissolved in 1 liter water. Circulate the water to mix the agent. Leave the disinfected water to act for at least two hours. If no dead biofilm comes out of the nozzles when circulation starts, drain the water. Rinse and refill the tub or pool.

### Initial dosage:

To quickly reach the initial concentration of DEWAN<sup>®</sup>-20 (active oxygen) (8 mg/l), place 2 DEWAN<sup>®</sup>-20 WP tablets in the floating tablet dispenser while filling the pool and add 15 ml of ALGI-CID algae inhibitor per cubic meter of pool water.

### Continuous dosing:

**To ensure the desired cleaning effect, the DEWAN<sup>®</sup>-20 CONCENTRATION must be kept continuously at around 8 mg/l!**

Ideally, 1 DEWAN<sup>®</sup>-20 WP tablet per cubic meter should be placed in the floating dispenser each week, and 10 ml of ALGI-CID should be added to the pool. In practice, it may be preferable to dose based on the actual DEWAN<sup>®</sup>-20 (active oxygen) level. To achieve the desired cleaning effect, the DEWAN<sup>®</sup>-20 (active oxygen) level must be kept at around 8 mg/l at all times. If the measured value falls below 4.0 mg/l, add another DEWAN<sup>®</sup>-20 WP tablet per cubic meter to the floating dispenser.

During pool operation, the pH value of the water must be kept between 7.2 and 7.4 at all times. We recommend using **DINAX MINUS P** for this purpose.

LONG LIFE

Use biocides safely! Always read the label and instructions before use!

JACUZZI TREATMENT

# DEWAN<sup>®</sup>-20 WP

chlorine-free bath water treatment  
tablet**APPLICATION:**

For residential and professional use.

**PACKAGING:**

- 1 kg box
- 5 kg bucket

**MEASUREMENT:**

- Dewan-20 tester
- Dewan-20 measuring strip

**QUALITY RETENTION:**

for 2 years from date of manufacture

**STORAGE:**

In a dry, cool place protected from light

## MEASUREMENT:

During the first two weeks of operation, it is advisable to check the DEWAN<sup>®</sup>-20 concentration every two days using a DEWAN<sup>®</sup>-20/pH tester or DEWAN<sup>®</sup>-20 test strip.

Two checks per week are also recommended thereafter.

## MAINTENANCE:

### Weekly maintenance:

In order to ensure that the pool water remains in perfect condition in the long term, we recommend adding one teaspoon ( $^3g/m^3$ ) of ALGA-SOKK P granules to the pool once a week (after the DEWAN-20 WP tablets have completely dissolved).

The pool can also be used with this amount of ALGA-SOKK P.

Check the chlorine level of the water: when it falls below 0.5 mg/l, insert the next dose of DEWAN-20 WP tablets into the floating tablet dispenser.

### Monthly maintenance:

**CHLORINE SHOCK:** We recommend that you disinfect the entire water cycle of the pool every month! ("shocking"). In this case, the sequence of operations described in point 1 must be performed.
