

CHLORALGIN

algae-growth inhibitor (liquid)

Prevents algae growth.

Biologically degradable.

It is a necessary product of the water disinfection process.

Only to use with chlorine-based disinfectants.

Non-dilutable.

Algae-growth inhibitors perform best at 7.0 to 7.8 pH and in the presence of at least 0.3 mg/l chlorine content.

If you use CHLORALGIN, please check that above values are in the specified range.

DOSAGE:

Starter dose:

Add 10 ml of Chloralgin to each 10 m³ of poolwater.

Continuous dosage:

- indoor pools: 40 ml / 10 m³/week
- outdoor pools: 60 ml / 10 m³/week

Frequently use (every day or more frequently dose) can occur resistance against the product.

It is advisable to follow the weekly dosing schedule. If there isn't any problem you can turn to 2 weeks dosing.

PACKAGE:

1 kg, 3kg, 5 kg and 20 kg

Before using a chemical always consult the product label and the instructions for use.
