

DINAFLOW BIOCID F

non-oxidising biocidal agent for membrane filtration

Agent which prevents the formation of biological deposition. Can be used for cooling water and membrane systems.

USAGE:

Non-oxidizing chemical, so it is not corrosive to the material of cooling circuits and does not damage the membrane material.

DOSAGE:

In recirculated or replacement water for cooling circuits, or before reverse osmosis desalination.

Recommended dosage amount: 10 g/m³

ADVANTAGES:

- highly effective against growth of bacteria, algae and fungi applied in small doses
- non-oxidising type of chemical
- easy to use, liquid product
- high concentration chemicals that can be used economically at high temperatures

PROPERTIES:

density (20°C): 1,05 g/cm³

pH value (20°C): 3.5

STORAGE:

The liquid should be protected from freezing.

PACKAGING:

20 kg returnable cans

Use biocides safely!

Always read the label and instructions before use.
